AK10 Firmware V1.10 Upgrade Guide

[Improvement]

  1. Support up to 24bit/96kHz when specific applications are used on Apple devices.
  (e.g. Flac player (non free App.), Onkyo HF player))

Note: Pre-installed music player on Apple devices supports up to 24bit/48kHz only.

1. Download the attached firmware tool file.
2. Decompress the file then you can see 4 files.
3. Power off the AK10 (Slide the power key to the left for 3 sec.) and check LED off.
4. Connect the AK10 to PC by USB cable with the RW & FF keys pressed together.
5. Then, LED color gets purple. (Blue + Red lights)
6. Execute 'AK10_FirmwareTool.exe' that was downloaded at step #2 and check the device is Connected as below.

7. Click 'Start' key on the right.
8. Check the upgrade status on the window.
9. After it's completed, the AK10 is automatically disconnected and LED light turns off.
10. Disconnect the AK10 from PC, then it's automatically powered on.
