

AK10 Firmware V1.10 Upgrade Guide

[Improvement]

1. Support up to 24bit/96kHz when specific applications are used on Apple devices. (e.g. Flac player (non free App.), Onkyo HF player))

Note: Pre-installed music player on Apple devices supports up to 24bit/48kHz only.

1. Download the attached firmware tool file.
2. Decompress the file and check AK10 1.10 firmware and firmware tool are in a same folder.
3. Double click the file, and then POP-up window is shown as below.
4. Drag & Drop the app icon to the application folder for installation.

5. Power off the AK10 (Slide the power key to the left for 3 sec.) and check LED off.
6. **Connect the AK10 to PC by USB cable with the RW & FF keys pressed together.**
7. Then, LED color gets purple. (Blue + Red lights)
8. Execute the application downloaded and press start button.
9. Upgrade is done once 'Bootload successful !!' message is shown.
10. To check the upgraded version, connect the AK10 to the PC and check "AK10 USB DAC 1.10" on System configuration setting – Sound
